

**NEW DESIGN!**  
**megaMAG<sup>®</sup> ADJUSTABLE BRACKET**  
for use in  
**INK CONTAINERS AND PAILS**

Now, an even simpler way to get your megaMAG into the thick of things. Use the bracket with the megaMAG attached and put it directly into your ink pail or container.

The improved design permits easy adjustment of depth so the megaMAG can reach to the very bottom of your ink container, grabbing metal particles, quickly removing them from the ink and saving your anilox!

The bracket hooks over the edge of the container and has a wing nut that can be loosened to adjust the position of the megaMAG. megaMAG simply screws onto the bracket. What could be easier?
